

Ovide Smart Assist with QTAKE HD

in Self Contained 22" Touchscreen

An advanced software application designed and developed for video assist professional. It's used to LOG, Capture, Playback, Edit and Process Video Out of any camera on set. The recordings are compressed using Apple's ProRes codec. It is the same codec Arri Alexa and Final Cut use. The built in touchscreen is 22" FullHD (1920×1080), and you can use external monitors.

What can Ovide Qtake Smart Assist do?

Multi Camera

System supports two HD cameras, all of them will record and playback simultaneously, just with a click.

Metadata

It can read camera's metadata: file name, roll, take, etc. Therefore, together with the manually entered info (ie cameraman, take rating, shot type...) will be incorporated to the automatically generated PDF camera report, which also includes thumbnails of each clip.

3D

You can use it in 3D shootings without Stereobrain or similar 3D processing hardware. You can adjust convergence live, preview 3D, measure differences, etc.

Blazing fast

With system optimization, the instant you press the power button, system will be ready to record in 15 seconds. When you need to find a take, you can instantly load a clip. The built in graphic browser is very intuitive and you will find the desired clip the a blink of an eye.

Processed Outputs

You can color correct, even import LUTs from finishing software such as DaVinci. You can compensate for anamorphic lenses, move it, rescale it... You will see it in the touch screen and in the external monitors.

Chroma Key

With the amazing built in Composite Room, you can chroma key, blend, wipe, using pre-recorded or imported clips, stills, import CGI imagery...

Automatic

System will record and playback when camera does: it will detect when camera starts and stops so that you don't need to worry while playing back takes. When playing back one take, the system looks for the matching pair of the other camera and plays them back in sync.

Play your clips on an iPad

Choose any of the thousands of clips stored in your project and play them instantly from your iPad, independently of the files being played/recorded on the Smart Assist.
